Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

I. microroughening by applying a mixture comprising: water, acid, an oxidant and a corrosion inhibitor.

II. microroughening by applying a mixture comprising: (a) hydrogen peroxide; (b) at least one acid; (c) at least one nitrogen-containing, five-member heterocyclic compound which does not contain any sulphur, selenium or tellurium atom in the heterocycle; and (d) at least one adhesive compound from the group consisting of sulfinic acids, seleninic acids, tellurinic acids, heterocyclic compounds containing at least one sulphur, selenium and/or tellurium atom in the heterocycle, and sulfonium, selenonium and telluronium salts having the general formula,

wherein A is S, Se or Te; R_1 , R_2 and R_3 are independently C_1 - C_6 alkyl substituted alkyl, alkenyl, phenyl, substituted phenyl, benzyl, cycloalkyl, substituted cycloalkyl, R_1 , R_2 and R_3 being the same or different; and X^- is an anion of an inorganic or organic acid or hydroxide, provided that the acid selected to constitute component (b) is not identical to the sulfinic, seleninic or tellurinic acids selected as component (d).

III. microroughening by applying a mixture comprising: from about 5 g/l to about 50 g/l hydrogen peroxide and about 0.1 g/l to about 50 g/l of an aromatic sulfonic acid or a salt thereof.

Art Unit: 1763

IV. microroughening by applying a mixture comprising: (a) a cupric ion source, (b) an organic acid with an acid dissociation constant (pKa) of 5 or lower, (c) a halide ion source, and (d) water.

V. microroughening by applying a mixture comprising: (a) an acid, (b) a copper complexing agent (c) a metal capable of having a multiplicity of oxidation states which is present in one of its higher positive oxidation states and which metal forms a composition soluble salt, and (d) oxygen.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Currently, claim 1 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named

Art Unit: 1763

inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
